Ministry of Higher Education and Scientific Research Scientific Supervision and Scientific Evaluation Apparatus Directorate of Quality Assurance and Academic Accreditation Accreditation Department

Academic Program and Course Description Guide

Introduction:

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

In this regard, we can only emphasize the importance of writing an academic programs and course description to ensure the proper functioning of the educational process.

Concepts and terminology:

<u>Academic Program Description</u>: The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

Course Description: Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

<u>Program Vision</u>: An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

<u>Program Mission</u>: Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

<u>Program Objectives</u>: They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

<u>Curriculum Structure</u>: All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

Learning Outcomes: A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

<u>Teaching and learning strategies</u>: They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extra-curricular activities to achieve the learning outcomes of the program.

1. Program Vision

Program vision is written here as stated in the university's catalogue and website.

2. **Program Mission**

Program mission is written here as stated in the university's catalogue and website.

3. Program Objectives

General statements describing what the program or institution intends to achieve.

4. Program Accreditation

Does the program have program accreditation? And from which agency?

5. Other external influences

Is there a sponsor for the program?

6. Program Structure							
Program Structure	Number of Courses	Credit hours	Percentage	Reviews*			
Institution	23	54		Basic			
Requirements							
College Requirements	1 (Baath Party crimes)	2		Basic			
Department							
Requirements							
Summer Training	NO						
Other							

* This can include notes whether the course is basic or optional.

8. Expected learning outcomes of the program

Knowledge

 Learning Outcomes 1 (A 1 - A 2) Human Biody; Yrpes of of ell structures, types of tissues, bones, skeleton, joints and muscles as well as nutrition. Human anoty: The student will be able to describe the composition of the human body, types of cell structures, types of tissues, triculary system, reproductive system, respiratory system, nervous system, respiratory system, reproductive system, nervous system, with the field of the theorem with the study of the tissues structure of the human body and aims primarily to give the student a basis for advanced study in the field of the student a basis for advanced study in the field of the student a basis for advanced study in the field of student is familiar with the histological description of the human hody. Fuglish Language: Providing students with comprehensive knowledge of the English language, literature, linguistics and translation. Human Rights and Democracy: Introduction to the subject Human Rights and Democracy of computer science and information technology. Muthamatics and Statistics: Knowledge about the basic concept of mathematics and statistics: Knowledge about the basic concept of mathematics and papilications of biostatistics in the medical field. Medical Physics: Introducting the basic concept of medical physics and it applications in the medical and pharmaceutical field. Medical Physics: Introducing the basic concept of medical physics and it applications in the medical and pharmaceutical field. Medical Physics: Introducing the basic concept of medical physics and it applications in the medical and pharmaceutical field. Medical Physics: Introducing the basic concept of anothematics and applications in the medical and pharmaceutical field. Medical Physics: and its applications in the medical and pharmaceutical field. Medical Physics: and its applications in the medical and pharmaceutical field. Medi	Nilowieuge	
 Human Biology: The study of the composition of the human body, body structure and function, human genetics and charging the composition of the human body, body structure and structure at yeas yeas methods, known of the student is familiar with the histological description of the human body. But a basis for advanced study in the field of health care, physiology. Human Rights and Democracy: Increasing the student a basis for advanced study in the field of health care, physiology. Human Rights and Democracy: Increasing the student's knowledge of the English language, iterature, linguistics and transitation. Human Rights and Democracy: Increasing the student's knowledge of the theoretical aspect and information technology. Mathematics and Statistics: Knowledge about the basic concept of mathematics and apharmaceutical field. Medical Physics: Introduction to the basic concept of medical physics and its applications of the imanancei in the field of medical physics and its applications of the intervence and and pharmaceutical field. Medical Microbiology: Medical bacteriolog is concerned with knowing the different types of bacteria, and classifying bacteria according to their bacillary shape. Crimes of the defunct Baath Party: Study of the social and pharmaceutical field, and aname of all mitreorogramisms, parts of the with stowing the different types of bacteria, and classifying bacteria and classifying bacteria and tabattory diagnosis. Crimes of the defunct Baath Party: Study of the social and pharmaceutical field and human rights, achieving equality among all citizers. Crimes of the defunct Baath Party: Study of the social and phychology is the student the ability to love reading and reading books. Crimes of the defunct Baath Party: Study of the social and phychological effects that resulted from genocides and phychycholy dig the student with many worked to form an analyzing	Learning Outcomes 1 (A 1 - A 2)	Learning Outcomes Statement 1 (A 3 - A 4)
 human body, types of cell structures, types of tissues, bones, skelcton, joints and muscles as well as nutrition. Human anatomy: The study of the digestive system, circulatory system, lymphatic system, respiratory system, reproductive system, endocrine system, nervous system, with the study of the tissue structure of the human body, and aims primarily to give the student a basis for advanced study in the field of the human body. -English Language: Providing students with comprehensive knowledge of the English language, ilterature, linguistics and translation. -Human Rights and Democracy: Increasing the student's howledge of the hortical aspect and historical development of the subject Human Rights and Democracy: Increasing the student's knowledge of the subject Human Rights and Democracy: Increasing the student's showledge of the subject Human Rights and Democracy: Increasing the sudent's knowledge of the subject Human Rights and Democracy: Computer Science: Introduction to the basic concept of computer science and information technology. -Omputer Science: Introducting the basic concept of medical physics: Introducing the basic concept of medical physics and its applications in the medical and pharmaceutical field. -Medical Physics: Introducing the basic concept of medical physics and its applications in the medical and pharmaceutical field. -Medical Physics: Introducing the basic concept of medical physics and and corading to their bacilla pose of bacteria, as well as according to their bacilla pose. -Crimes of the defunct Baath Party: Defining the nature of the political system that the Baath Party: Pofining the nature structure and landiving agrousi. -Democracy: protecting public freedoms of all king their opixis of a classify of pose sciular structures and trading therm structure in the sublex of the political system that the Baath Party: polinions into account without biasing anyone.	-Human Biology: The study of the composition of the	-Human Biology: The student will be able to describe
 bones, skeleton, joints and muscles as well as nutrition. -**Biochemistry:** Explains the specificity of enzymes, the chemistry involved in enzyme work, and how the process of glucose metabolism occurs, which ultimately leads to the generation of large amounts of energy. It is interested in studying bioenergy, the role of ATP, the importance of carbohydrates and their metabolism, and the importance of Fats and their metabolism, amino acids, proteins and their metabolism, and plasma proteins. And the diversity of the work of the endocrine system and hormones, nucleotide metabolism, DNA structure, and the process of transcription and translation.

- **Pathophysiology**: Describes the basic concepts of diseases at the cellular level related to infection, the body's defense mechanism from diseases, mutations, and cellular reproduction. It presents an outline of the basic pathological factors that affect the disease process. It describes the effect of abnormal functions on the organs associated with the disease process of the target body systems. It describes the clinical manifestations associated with diseased organs. - **Public Health:** This program allows students to understand the principles of public health and the art of preventing disease, promoting health, and prolonging life, through an organized community effort. - Clinical chemistry: studies the required laboratory tests and interprets the results, disorders of cellular carbohydrate metabolism, disorders of plasma fats and lipoproteins, liver function tests, disorders of kidney

function, and plasma enzymes in diagnosis. Hypothalamus and pituitary gland. Adrenal . Reproductive system. Pregnancy and infertility. Thyroid function tests. Plasma proteins.

- **Clinical laboratory training:** aims to learn how to conduct different types of analyses, discuss the results, and write clinical reports according to data obtained from the evaluation. Training includes hematology, parasitology, bacteriology, biochemistry, quality control, immunology, serology, virology, general urine examination, sterilization, and blood sampling. -Pathophysiology: Understanding the principle of living cell therapy that has the ability to repair damaged pathways, renew the immune system, and restore health to many living with chronic disease and damaged tissues by diagnosing diseases by detecting causative factors. -Public Health: This program allows students to understand the principles of public health and the art of preventing disease, promoting health, and prolonging life, through an organized community effort.

- **Clinical Chemistry:** Following developments in techniques used in clinical chemistry as well as in molecular diagnosis and detection of many biomolecules using different biochemical methods and then applying them to clinical cases in the interest of improving outcomes and experiences for patients.

- **Clinical laboratory training:** knowledge in the fields of laboratory analysis

It provides students with the knowledge, skills, and efforts required to work in diagnosing diseases through laboratory tests in the hospital.

Learning Outcomes 2 (B 1)	Learning Outcomes Statement 2 (B 2)
-The concept of studying and describing the	-The skill of describing the composition of the human
composition of the human body cellular, histologically	body.
and anatomically.	-Skill in conducting biostatistics applications in the
-Basic mathematics concept and application of	medical field.
biostatistics in the medical field.	-Skill in applications of medical physics in the field of
-The concept of basic medical physics and its	pharmacy.
applications in the field of pharmacy.	-Skill in computer applications in the medical field.
-The concept of programming and computers and its	-The skill of acquiring English for communication.
applications in the field of information technology.	-The skill of correct use in gaining freedom to express
	one's opinion.

 The concept of the English language and internal and external linguistic communication. The concept of democracy, freedoms and expression of opinion. The concept of medical microbiology and drug treatments to treat bacterial, viral and parasitic diseases, as well as introducing the most important immunological concepts, such as understanding the mechanism of action of the immune system and the most important diseases resulting from excessive or decreased immune response. The concept of developing the student's linguistic vocabulary in the Arabic language. Knowledge of the nature of biochemistry within the body including basic substances such as carbohydrates, fats, amino acids and protein. Study and detect these substances in terms of their increase and decrease in sick people. The concept of pathology and the principle of treating a living cell that has the ability to repair damaged pathways, rejuvenate the immune system, and restore health to many living with chronic disease and damaged tissue. The concept of public health and the efforts required to work in diagnosing diseases through awareness, laboratory tests, and the hospital to conduct special care. The concept of developments in the techniques used in clinical chemistry and knowledge in the fields of laboratory analysis and diagnosis of diseases by detecting the factors that cause them 	 The skill of using appropriate antibiotics to treat bacteria, viruses, or parasites according to the laboratory result report. The skill of the student acquiring a culture of love for reading and accompanying books. Skill in detecting many biomolecules using different biochemical methods. The skill of living cell therapy has the ability to repair damaged pathways, rejuvenate the immune system, and restore health to many living with chronic disease and damaged tissue. Awareness, laboratory and hospital testing skills to conduct special care for patients. The skill of acquiring knowledge in the fields of clinical techniques and laboratory analyzes to diagnose diseases.
Learning Outcomes 3 (B 3)	Learning Outcomes Statement 3 (B 4)
Listening skill - practical skill - research skill	The skill of working in a private pharmacy - the skill of working in a hospital - the skill of decision-making - the skill of leadership
Ethics	
Learning Outcomes 4 (C 1)	Learning Outcomes Statement 4 (C 2)
Enabling students with management, organization, and communication skills for the purpose of accessing advanced technology in all areas of clinical science.	Make students able to use critical thinking, translation, explanation and evaluation in problem-solving methods.
Learning Outcomes 5 (C 3)	Learning Outcomes Statement 5 (C 4)
Students have the opportunity and encouragement to undertake professionally relevant qualifications.	Students are able to reflect on their own professional development.

9. Teaching and Learning Strategies

- 1- Lectures (questions and discussion)
- 2- Laboratory skills
- 3- White board
- 4- Interactive electronic board
- 5- Seminars
- 6- Homework
- 7- Unknown experiments
- 8- Case study

10. Evaluation methods

- Theoretical exam
- Practical exam
- Classroom activities
- Homework
- Oral discussions
- Reports
- Auditing skills
- Personality reflection

Professional Development

Mentoring new faculty members

1- The branch head follows up on new teachers by entering the classroom during the lecture

2- Guidance in developing teaching skills

3- Encouraging the development of research skills

- 4- Encouraging the development of leadership skills
- 5- Guidance in developing practical skills
- 6- Encouraging decision-making skill

Professional development of faculty members

- Developing the performance and skills of teaching staff in accordance with the latest developments in teaching in the clinical laboratory fields to ensure that the branch continues on the correct scientific path.

- Raising the scientific level of scientific research and participating in scientific conferences and seminars.

- Encouraging the scientific and cultural activity of the teaching staff in the branch.

12. Acceptance Criterion

(Central admission to the Ministry of Higher Education and Scientific Research / Iraq / according to the student's grades)

13. The most important sources of information about the program

14. Program Development Plan

Syllabus development plan by adding or updating a Syllabus

- To study the composition of human body, types of cell structures, types of tissues, bone, skeleton, joints and muscle as well as nutrition.
- Human biology also explains in details different body systems.
- At the end of the course, the student should be able to describe the composition of human body, body systems function, Immunity, Blood and Disease.
- Human genetics such as the Mendelian inheritance, division of chromosomes, and terms such as allele, locus, homo and heterozygous.

Course Objectives</u> 8. Course Objectives To provide students with knowledge about pathogenesis, morphology Laboratory diagnosis, identification, pathology, clinical features of medically important parasites Viral diseases and the basic concepts of immunity procedures against these diseases 					
Strategy	 1- Theoretical lectures 2- Practical laboratory skills 3- Whiteboard 4- Interactive electronic whiteboard 5- Seminars (questions and discussion) 6- Homework 					

10. Course Structure (Hours : theory 3 + lab. 2)						
Week	Hours	Unit or subject name	Required Learning Outcomes	Learning method	Evaluation method	
1	5	-Introduction of Parasitology& classification - Introduction to immunology	 To understand the general concepts of Parasitology& determine the main characterization for parasite classification To learn immunity and the major parts of the immune system 	 Lectures (questions and discussion) Interactive electronic board Class effectiveness 	Theory Exam Lab. Exam Quiz Class effectiveness	
2	5	-Protozoa pathogenic & commensal Amoeba - Innate and adaptive immune response	 To compare between <i>E.coli, E.histolytica</i> To realize the body defense lines and biological barriers to infections 	=	=	
3	5	-Intestinal & reproductive flagellates - Antigens	 Giardia, Balantidium Trichomonas To describe the term antigen, classification of antigens, antigen determinant (epitope), and its forms 	=	=	
4	5	- Haemoflagellates: Leshmania spp.; Trypanosome spp. Coccidia - Antibodies	 Haemoflagellates Toxoplasmodium To explain the structure, functions and biological properties of individual antibody classes 	=	=	
5	5	-Helminthes: Classification, platyhelminthus Trematodes Flukes: Hepatic flukes, Blood flukes (<i>Schistosoma spp</i>). - Major histocompatibility complex (MHC)	-To realize the general characterization and classification of helminthes, the main classes, pathogenicity ,life cycle ,transmission ,diagnosis, and trearment - To describe the classification, structure, and function of MHC groups I, II, and III, and understand the gene structure of MHC	=	=	
6	5	-Cestodes Tap worms: <i>Taenia spp.</i> , <i>Echinococcus</i> (Hydatid cyst).Nematods: <i>Ascaris, Entrobius</i>	 To realize pathogenicity ,life cycle ,transmission ,diagnosis, and treatment To explain the types and function of 	=	=	

		-Cytokines	immunoregulatory cytokines		
			Mid Town Exon		
/		X 71 1	Mid-Term Exam		
8	5	- Virology: Introduction, and general characters - Complement	- To realize the general concepts of Virology - To describe the classical, lectin, and alternative complement activation pathway	=	=
9	5	 Reproduction and isolation methods for viruses Hypersensitivity 	 To understand the mechanisms of viral Replication To define the term immunologic hypersensitivity, to name the classification of immunologic hypersensitivity, and to describe their main characteristics 	=	=
10	5	-Anti-viral therapy and gene interaction -Tumor immunology	 To realize types of antiviral compounds To describe tumor antigens, their subtypes, properties, and methods for demonstrating tumor antigens and human tumor antigens 	=	=
11	5	-Classification of viruses -Autoimmune diseases and tolerance	 To realize viral characterization used for classification To describe autoimmune diseases and their classification, genetic factors of autoimmunity, the influence of gender, age, infections, and immunologic disorders on the occurrence of autoimmunity 	=	=
12	5	- DNA viruses	-To understand the pathogenicity, diagnosis, transmission, and treatment of Herpes, adeno, pox, papoviride	=	=
13	5	-RNA viruses	- To understand the pathogenicity, diagnosis , transmission, and treatment myxoviridae, Rhabdo, picorna, and Reoviridae	=	=

- 8. Course Objectives
- Learn the concept of biochemical materials (protein, peptide, amino acid)
- Learn the concept of carbohydrate, lipid, neucleic acid and DNA .
- Learn the concept of enzymes and enzyme kinetics.
- Learn the concept of hormone and signal transduction
- Learn the concept of vitamins.
- Learn the concept of intracellular and extracellular membranes

9.	Teaching and Learning Strategies
Strategy	A. Teacher- center approach :
	1. Direct instruction (lecture style):explain knowledge or skill by transferring information.
	2. Demonstration: show knowledge and activity by power point, video,,
	3. Debriefing by conversational method
	4. Facilitator (active learning): promote self-learning, extended thinking.
	B. Student-center approach :involve inquiry based learning and cooperative learning.
	1. Delegator (group style):develop knowledge and skill through experience
	, lab.activity, peer feedback activity, research activity
	C.Assessment methods: Formative assessment, summative assessment,
	Quizzes,exam.

10.	Cour	se Structure (Hou	rs : theory 3 + lab. 2)		
Wee k	Hours	Unit or subject name	Required Learning Outcomes	Learning method	Evaluation method
1	5	Introduction	Structures of A.A (table of standard A.A abbreviation and side chain); Classification, properties, isomerism.	-Power Point Presentation,-Tutorials (Pen and White- board), Problem Solving, Practicalities	-Formative assessment, -summative assessment, -Quizzes, - Exam
2	5	Amino acids	: Chemical reactions, Zwitter ions, titration curve calculating Iso electric point values. Examples and questions. Non standards A.A: Structures, existence and clinical value.	=	=
3	5	Peptides	Peptide bond, resonance forms, isomers, physical properties and chemical reactions. Essential poly peptides in human body, structures, roles and clinical values.	=	=
4	5	Proteins	Structure and conformations of proteins, Primary structure, Secondary structure (a helix, p sheet), tertiary structure, quaternary structure. Classification, synthesis, cellular functions (Enzymes, cell signaling, & ligand transport, structural proteins), protein in nutrition		
5	5	Denaturation of proteins and protein sequencing	: Determining A.A composition, N- terminal A.A analysis, C- terminal A.A analysis, Edman degradation, prediction protein sequence from DNA/ RNA sequences. Methods of protein study: Protein purification, cellular localization, proteomics and bioinformatics, structure	=	=

			predication and simulation.		
6	5	Carbohydrates	: Chemistry and classification, biomedical importance, classification of CHO, Stereochemistry of monosaccharides, CHO; Physiologically important mono-saccharides, glycosides, disaccharides , polysaccharides	=	=
7		Lipids	Introduction, classification of lipids, fatty acids (F.A), nomenclature of F.A, saturated F.A, unsaturated F.A, physical and physiological properties of F.A, Phospholipids, lipid peroxidation and antioxidants, separation and identification of lipids, amphipathic lipids.	=	=
8,9	5		Midterm exam	=	=
10	5	Enzymes	Structures and mechanism, nomenclature, classification, mechanisms of catalysis, thermodynamics, specificity, lock and key model, induced fit model, transition state stabilization, dynamics and function, allosteric modulation. Biological function, cofactors, coenzymes.	=	=
11	5	Enzyme-Kinetics	: General principles, factors effecting enzyme rates (substrate conc., pH, temperature, etc), single- substrate reaction (Michaelis-Menten kinetics), kinetic constants. Enzyme inhibition	=	=
12	5	Nucleic Acid	: Chemical structure, nucleic acid components, nucleic acid bases, nucleotides and deoxynucleotides (Properties, base pairing, sense and antisense, super-	=	=

			coiling, alternative		
			structures, quadruple		
			structures. Genes and		
			genomes, transcription and		
			translation, replication.		
13	5	Biochemistry of the	Classification of hormones,	=	=
		endocrine system	biomedical importance, the		
			target cell concept and		
			hormone receptors,		
			biochemistry of hormone		
			signal transduction.		
14	5	Vitamins and Minerals	Water soluble vitamins,	=	=
			lipid soluble vitamins		
15	5	Biochemistry of	Plasma membrane	=	=
		extracellular and intra-	structure and function;		
		cellular communication	Biomedical importance,		
			membrane proteins		
			associated with lipid		
			bilayer, membranes protein		
			composition, dynamic		
			structures of membranes, a		
			symmetric structures of		
			membranes.

1. Course Name: New Headway Plus

2. Course Code:

3. Semester / Year: Second Semester/Fourth Year

4. Description Preparation Date: 2024

5. Available Attendance Forms: Fourth Year

6. Number of Credit Hours (2 theory) / Number of Units (2)

7. Course administrator's name (mention all, if more than one name) <u>dr.olaa.abdulghafoor@nahrainuniv.edu.ig</u> : Email : أ. علا عبد الغفور محمد صائح Name

- Developing students' linguistic and communication skills through the latest technical means
- Providing students with comprehensive knowledge of English language, literature, linguistics and translation
- Encouraging dialogue, understanding and communication between cultures internally and externally for the purpose of providing distinguished graduates to serve society

9. Teaching and Learning Strategies

1. Course Name: Clinical Chemistry

2. Course Code:

3. Semester / Year: First Semester/Fifth Year

4. Description Preparation Date: 2024

5. Available Attendance Forms: Fifth Year

6. Number of Credit Hours (3 theory 2 Lab.) / Number of Units (4)

7. Course administrator's name (mention all, if more than one name)dr.feryal.hashim@nahrainuniv.edu.iq:Email(Theory)dr.ammal.obaidi@nahrainuniv.edu.iq:Email(Theory and Lab.)i.namei.nate(Lab.):Namedr.ghufran.mohammed@nahrainuniv.edu.iq:Email(Lab.)dr.weaam.fadhil@nahrainuniv.edu.iq:Email(Lab.)dr.weaam.fadhil@nahrainuniv.edu.iq:Email(Lab.)

- 8. Course Objectives
- Discern the concept of Carbohydrates metabolism disorders, lipid metabolism. calcium metabolism
- Discern the concept of Pituitary Gland Disorders, Thyroid gland Disorders, Adrenal gland disorders
- Discern the concept of Diagnostic enzymology, Liver Function Tests.
- Discern the concept of Kidney Function Tests, Acid- Base Disorders
- Discern the concept of Reproductive system disorders, biochemical assessment during pregnancy.
- Discern the concept of Drug interaction with laboratory Tests.

9. Teaching and Learning Strategies

Strategy	A. Teacher- center approach :
	1. Direct instruction (lecture style):explain knowledge or skill by transferring informatio
	2. Demonstration: show knowledge and activity by power point, video,,
	3.Debriefing by conversational method
	4.Facilitator (active learning): promote self-learning, extended thinking.
	B. Student-center approach :involve inquiry based learning and cooperative learning.
	1.Delegator (group style):develop knowledge and skill through experience ,lab. activity,
	peer feedback activity, research activity
	C. Assessment methods: Formative assessment, summative assessment, Quizzes, exam.

10. 0	10. Course Structure (Hours : theory 3 + lab. 2)				
Week	Hours	Unit or subject name	Required Learning Outcomes	Learning method	Evaluation method
1	5	Disorders of Carbohydrates metabolism	, Hyperglycemia & Diabetes mellitus, Glycosylated Hemoglobin, Ketones, Ketones, Hypoglycemia.	-Power Point Presentation, -Tutorials (Pen and Whiteboard), -Problem Solving, -Practicalities	-Formative assessment, -summative assessment, -Quizzes, -Exam
2	5	Disorders of lipid metabolism.	Arteriosclerosis,Dyslipidemi as, A- Hyperlipoproteinemias, Hypolipo-proteinemias	=	=
3	5	Disorders of calcium metabolism	Vitamin D, Parathyroid Hormones (PTH), Calcitonin Hormone, Hypercalcaemia, Hypocalcaemia, Metabolic Bone Diseases	=	=
4	5	Pituitary Gland Disorders	hypothalamic hormones, Anterior pituitary hormones, Growth hormone, Prolactin Hormone, hypopituitarism, Posterior Pituitary Horm,	=	=
5	5	Thyroid gland Disorders	Thyroid gland and hormones, ypothyroidism, Hyperthyroidism,	=	=
6	5	Adrenal gland disorders	Adrenal gland hormones, Hypercortisolism, Hyperaldosteronism, Androgen excess, Adrenal insufficiency, Adrenal medulla	=	=
7	5	Diagnostic enzymology	Enzymology, Creatine Kinase, Troponin, Lactate Dehydrogenase, Aspartate Aminotransferase, Alanine minotransferase, Alkaline Phosphatase, Acid Phosphatase, Gamma– Glutamyl transferase, Alpha- Amylase, Lipase, Plasma cholinesterase	=	=

12.Learning and Teaching Resources

Required textbooks (curricular books, if any)	-Clinical Chemistry & Metabolic Medicine, Crook
Main references (sources)	- Medical biochemistry by Kaplan
Recommended books and references (scientific	- Clinical Chemistry Principles by Bishop,
journals, reports)	
Electronic References, Websites	- Practical Clinical biochemistry analysis
Electronic References, Websites	-Scientific Movies

1. Course Name: Clinical Laboratory Science

2. Course Code:

3. Semester / Year: Second Semester/Fifth Year

4. Description Preparation Date: 2024

5. Available Attendance Forms: Fifth Year In Hospital Laboratories

6. Number of Credit Hours (4 Lab.) / Number of Units (2)

7. Course administrator's name (mention all, if more than one name)dr.feryal.hashim@nahrainuniv.edu.iq:Emaili.e. فريال هاشم رضاi.emaildr.ghufran.mohammed@nahrainuniv.edu.iq:Emaildr.weaam.fadhil@nahrainuniv.edu.iq:Emaili.namei.name

8. Course Objectives

- To provide general information about the biochemical basis of diseases and the principles of laboratory diagnosis
- It supplies specific guidance on the clinical value of chemical investigations, indicating their range of application and limitations as well as relating results of laboratory tests
- process of clinical diagnosis and management as these might be applied to individual patients

9. Teaching and Learning Strategies

Strategy	A. Student-center approach: involve inquiry based learning and			
	cooperative learning.			
	1. Delegator (group style):develop knowledge and skill through			
	experience			
	2.Facilitator (active learning): promote self-learning, extended thinking			
	lab. activity, peer feedback activity, research activity			
	B.Assessment methods: Formative assessment, summative assessment,			
	Quizzes,exam.			

10. 0	10. Course Structure (Hours : lab. 4)				
Week	Hours	Unit or subject name	Required Learning Outcomes	Learning method	Evaluation method
1	4	Instrumentation and Analytical Principles	Diagnostic test basics, collecting &transporting specimens, venipuncture, urine specimen, stool specimen.	 1- Tour in Hospital Laboratories 2-LaboratoryDiagnosis 3- Lectures (questions and discussion) 	Laboratory training exam in Hospital Quiz Class effectiveness
2	4	Immunological test	C-reactive protein test, = Rheumatic factor test, Rosebengal test, Typhoid fever Test (Widal test), Pregnancy Test. Serological tests: VDRL, ASO- Titer, Hepatitis tests		=
3	4	Carbohydrates	Biochemical tests: Fasting blood glucose, Post- prandial glucose, Oral glucose tolerance test.	=	=
4	4	Proteins and Non ProteinNitrogenous Compounds	Blood protein,Blood urea, = Blood creatinine, Creatinine clearance, Uric acid.		=
5	4	Electrolytes	Calcium, Inorganic = phosphate, Serum chloride		=
6,7	4	Enzymes And Liver Function Test	Alkaline phosphatase, Acid phosphatase, Alanine amiotransferase, Aspartate aminotransferase, Lactate dehydrogenase, Creatine phosphokinase, bilirubin	=	=
8,9			Mid-Term Exam		
10	4	Lipid and lipoprotein	Cholesterol, Lipoproteins, triglycerides.	=	=
11,12	4	Hematological Analyses ,Complete Blood Count (CBC)	Hematological tests: RBC count, Hb, PCV, RBC indices, WBC count,Platelets count. Blood typing, Coombs test, Bleeding time, ESR.	=	=
13	4	Urine analysis	General urine examination, urine specimen collection.	=	=
14,15	4	Bacteriology	Microbiological tests: culture and sensitivity tests, Staining methods.Culture	=	=

	medi medi for id bacte tests antib for d disea diagu Final	a, Enriched culture a for general use.Tests lentification of tria, Disk diffusion of sensitivity to iotics, Choice of drugs isk test, bacterial se and their laboratory nosis. Exam
