# Academic Program and Course Description Guide

# **Introduction:**

The educational program is a well–planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

1

In this regard, we can only emphasize the importance of writing an academic programs and course description to ensure the proper functioning of the educational process.

### **Concepts and terminology:**

<u>Academic Program Description</u>: The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

**Course Description**: Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

**<u>Program Vision</u>**: An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

**<u>Program Mission</u>**: Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

**<u>Program Objectives</u>**: They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

<u>Curriculum Structure</u>: All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

**Learning Outcomes:** A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

<u>Teaching and learning strategies</u>: They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extra-curricular activities to achieve the learning outcomes of the program.

3

#### 1. Program Vision

To change the face of pharmacy through innovations that improves health

#### 2. Program Mission

To advance the precise, safe, and effective use of medicines to improve health through excellence in patient care, education, research, and public service

#### 3. Program Objectives

1. Contribute leadership at the local, national levels to fulfill the mission and visions of the department, faculty, university and profession.

2. Improve the health and well-being of patients by facilitating and providing safe and effective medication use, and by identifying, examining and eliminating barriers to optimal medication use.

3. Advance the role of pharmacy and pharmacists in improving the public health and enhancing the quality of human life through education and training, clinical preventive services, and community-based health promotion and disease prevention activities.

4. Providing education to students in various aspects of pharmacy practice, utilizing the principles of pharmaceutical care, problem-based learning and critical thinking that all together enable them to acquire in-depth expertise in pharmaceutical, social/economic management and in related sciences in order to function as practitioners and scientists.

5. Serving the community by providing pharmaceutical care activities that lead to improvements in healthcare delivery and enhances health outcomes.

6. Contributing to the profession of pharmacy by participation in leadership roles in pharmaceutical organization and community programs

#### 4. Program Accreditation

Try Getting it.

#### 5. Other external influences

\* This can include notes whether the course is basic or optional.

7. Program Description									
Year/Level	Course Code	Course Name		Credit Hours					
			theoretical	practical					
Third stage (one course)		Pharmacy ethics	One hour weekly						
Fourth stage (one course)		Communication	Two hours weekly						
Fourth stage course		pharmacy Clinical	weekly hours Two	Two for each course hours					
Fifth stage (two course)		Applied Therapeutic	Two hours second course Three hours first course						
Fifth stage (One course)		Therapeutic drug monitoring	Two hours weekly	Two hours weekly					
Fifth stage (One course)		pharmaeconomy	Two hours weekly						
Fifth stage (One course)		Hospital training		Two hours weekly					

8. Expected learning outcomes of the program						
Knowledge	Knowledge					
Learning Outcomes 1	1-Studying the different types of simple diseases and how to deal with them in the pharmacy					
	2- Studying different diseases (causes, symptoms, diagnosis and treatment)					
3- Study the communication skills necessary for the work of the pharmac						

	4- Studying the ethics of the pharmacy profession
	5- Studying the foundations of the pharmaceutical economy
	6- Studying the methods of calculating the concentrations of dangerous drugs in the blood and how to deal with them
Skills	
	Communication skills with patients
	The skill of drug education for patients
	The skill of extracting the required information from its approved sources
Ethics	
	-Thinking skills through translating, analyzing, evaluating and extracting ideas
	- Cultivating ethical values for the correct treatment of patients

### 9. Teaching and Learning Strategies

-By giving theoretical, practical and practical lectures and assigning small groups create educational scenarios Simulate the work of a pharmacist in pharmacies

#### 10. Evaluation methods

Reviewing personal thinking skills, presenting results, and using new methods of learning

11. Faculty								
Faculty Members								
Academic Rank	Specializ	ation	Special Requirements/S (if applicable)		Number of the teaching staff			
	General	Special		Staff	Lecturer			
Prof. Dr		pharmacolo gy						
L. Dr	Sciences in pharmacy	pharmacy	Anti- oxidant and aging process	1				
Ass. L		Clinical pharmacy	Statistics analysis of clinical scientific research	2	1			

#### **Professional Development**

#### Mentoring new faculty members

There are certain units within the program for personal development, giving students opportunities and encouraging them to engage in Professionally relevant qualifications that allow students to reflect on their own professional development also, Participation in seminars and workshops presented by the branch

#### Professional development of faculty members

Participation in seminars and workshops presented by the branch such as

Anti-oxidant and aging process

Statistics analysis of clinical scientific research

### 12. Acceptance Criterion

The student is accepted into the college within the central admission of the Ministry of Higher Education and Scientific Research.

### 13. The most important sources of information about the program

The World Health Organization and various scientific sources from books and the Internet And the Committee of Deans of Colleges of Pharmacy in Iraq.

# Program Development Plan
